

## Locus allele count : a tool to estimate the number of contributors in a DNA mixture

Marie-Pier Thibault, Forensic biologist, LSJML

Green Mountain DNA Conference – July 2023

1

## About our lab

- Serves a population of about 8,5 million
- Caseload of >8000/year; 35 000 exhibits
- Team of 84, including 45 forensic biologists

2

## About our lab

- Serves a population of about 8,5 million
- Caseload of >8000/year; 35 000 exhibits
- Team of 84, including 45 forensic biologists

- Amplification and CE : AmpFLSTR™ Identifier™ Plus (ID+; 15 sites), 3500 XL, Genemapper ID-X
- STRMix 2.5, validated up to 5C
- Support the inclusion with an LR > 1000 (0.001 to 1000 = inconclusive)

3

## Plan

- Introduction:
  - Importance of making an informed estimation of the number of contributors (NOC) in a DNA mixture
  - Highlights of our previous work on the Total Allele Count (TAC)
- How can locus allele count (LAC) be used to refine NOC estimation
  - DNA mixtures generation
  - How to use the tool
  - Let's put the tool to the test

4

## DNA evidence

- DNA evidence is widely used as a circumstantial evidence in crime investigation.

## DNA evidence

- DNA evidence is widely used as a circumstantial evidence in crime investigation.
- ... but DNA evidence doesn't speak on its own

## DNA evidence

- DNA evidence is widely used as a circumstantial evidence in crime investigation.
- ... but DNA evidence doesn't speak on its own
- Complex DNA mixtures now represent a significant portion of DNA casework results and approaches to mixture **interpretation** are of great interest to the forensic community.

9

## Interpretation is required for probabilistic genotyping

10

## NOC estimation is a core component of the weight of evidence

11

## NOC estimation is a core component of the weight of evidence

12

## NOC estimation is a core component of the weight of evidence

### NOC

- the true NOC is never known in forensic samples
- an essential variable of the deconvolution
- uncertainty remains about the NOC even after careful analysis (> 3C)
- Variability between analysts (**DNAmix 2021**)

13

## NOC estimation is a core component of the weight of evidence

### NOC

- the true NOC is never known in forensic samples
- an essential variable of the deconvolution
- uncertainty remains about the NOC even after careful analysis (> 3C)
- Variability between analysts

What are the consequences of an incorrect NOC estimate?

14

## Incorrect NOC estimate can lead to false exclusion

15

## Incorrect NOC estimate can lead to false exclusion

16

Incorrect NOC estimate can lead to false exclusion

17

Tools used to estimate the NOC

Maximum allele count (MAC)  
Allelic balance  
Inter-loci consistency

18

Tools used to estimate the NOC

Maximum allele count (MAC)  
Allelic balance  
Inter-loci consistency

Maximum likelihood estimation (MLE)

NOCH (Bayesian method)  
PACE (AI classification)  
FaSTR (AI classification)

19

Need time to learn & validate

20

## Total allele count distribution (TAC curves) improves NOC estimation

CANADIAN SOCIETY OF FORENSIC SCIENCE JOURNAL  
<https://doi.org/10.1080/00085030.2022.2028359>

RESEARCH ARTICLE

### Total allele count distribution (TAC curves) improves number of contributor estimation for complex DNA mixtures

Josée Noël<sup>a</sup>, Sarah Noël<sup>a</sup>, France Mailly<sup>a</sup>, Dominic Granger<sup>a</sup>, Jean-François Lefebvre<sup>a</sup>, Emmanuel Milot<sup>b</sup> and Diane Séguin<sup>a</sup>

34

### Generate DNA mixtures

- Dataset generated in Excel
- 2,7 millions profiles were generated
- 100 000 DNA mixtures were generated for each NOC
- LSJML-Caucasian allele frequencies;  $\theta = 1\%$ ; ID+

Methods

Locus Allele Count

35

### Step 1 : Draw genotypes

- Example for 2C DNA mixtures

	D8S1179	
	C1	C2
Mix 1	1067	1014
Mix 2	1002	1017
Mix 3	1043	1095
...		
Mix 100 000	1046	1013

Methods

Locus Allele Count

36

### Step 2 : Convert genotypes to alleles

- Example for 2C DNA mixtures

	D8S1179			
	C1	C2	C1	C2
Mix 1	1067	1014	14, 15	8, 10
Mix 2	1002	1017	9, 12	9, 15
Mix 3	1043	1095	12, 11	17, 13
...				
Mix 100 000	1046	1013	9, 12	8, 9

37

### Step 3 : Count the number of alleles

- Example for 2C DNA mixtures

	D8S1179				
	C1	C2	C1	C2	
Mix 1	1067	1014	14, 15	8, 10	4
Mix 2	1002	1017	9, 12	9, 15	3
Mix 3	1043	1095	12, 11	17, 13	4
...					
Mix 100 000	1046	1013	9, 12	8, 9	3

38

### Graphical data analysis

- From the data generated, we can compute:

60

### How to use the tool

- Graphical analysis

61

### How to use the tool

- MAC:  $\geq 4C$
- TAC: 3 or 4C
- LAC:  $> 4C$

62

### Does it help to improve NOC estimation?

- 3 DNA analysts
- 100 DNA mixtures from the Proved-IT degradation data set ( $> 3C$ )
- Each analyst:
  - Used all the tools at his disposal to estimate the NOC
  - Re-analyzed the DNA mixture, using all the tools + **LACcurves**

\*A single NOC was recorded for each DNA mixture.

63

### Does it help to improve NOC estimation?

64

Does it help to improve NOC estimation?

65

Does it help to improve NOC estimation?

66

Does it help to improve NOC estimation?

67

Limitations

- Ground truth is not known for casework sample
  - Forced to choose a NOC
- Performed well using mixtures from the Proved-IT dataset
  - Compared to our caucasian population
    - Differences in allelic distribution
    - Higher diversity index
  - Tested the tool with ID+ (15 sites)
- We support the inclusion for LR > 1000

68

## Conclusion

- We have developed a tool that is
  - ✓ Easy to use
  - ✓ Doesn't require any advanced software or coding skills to implement
    - Excel templates are available!
  - ✓ Leverage from the Total Allele Count method

- Version 2.0 coming soon!
